

# what is photon?

Photon is a software solution, focused on patient communication and care. With Photon, consults and notifications are generated to alert specialists of new information on patients, which can include labs, radiology, and transcriptions. Messaging can occur between any user including specialists, ER personnel and other caregivers throughout the provision of care.

Photon is a Patient Information and Communication Application which...

- Pulls and encrypts patient data from a hospital's HIS so it can be safely viewed from a variety of mobile devices
- Notifies a provider when items they are waiting on are ready
- Provides a secure and patient centric communication platform, that is time/date stamped and includes photo/video documentation

Using Photon results in improved workflow, decreased patient care delays & improved patient outcomes.
