

New Consultation Process

__Hospital Name__ values all of our patients and providers including the sensitive information you analyze and exchange throughout the continuum of care.

In order to protect this information and improve timely clinical communication our hospital has implemented Photon: A HIPAA-compliant consult-driven application... accessible anytime, anywhere.

Wouldn't you prefer to...

- Receive an XRAY or CT SCAN with your initial consult
- Avoid instances of "Phone Tag" and/or "Page and Wait"
- Be untethered from a computer while on-call
- Receive real-time labs and transcriptions via your smartphone
- Customize audible notifications for any of your patients

Photon enables you to do all of this and more. Simple and easy to use, Photon dramatically expands the range of possibilities to improve patient care. This, along with concerns surrounding the transmission of PHI in an unsecure manner, _(Hospital Name)_ now requires all consultations from this point forward to be initiated and completed solely through the Photon application.

The Photon team will be on site to train and support this exciting new technology in order to leverage its fullest potential.

__Hospital Name__ is excited to provide you with the platform to accelerate clinical decisions and better patient care.

Thank you!

Hospital CEO
